

NEW PRODUCT LINE

DIN METRIC COMPRESSION FITTINGS

DIN Metric Tube Fittings are compression-style fittings with a flareless bite type construction used to connect metric tubing to fittings thread connections generally composed of a body, ferrule and nut. The ferrule's cutting edges bite into the outer surface of the tubing, which ensures the necessary holding and sealing power for high operating pressures and extreme vibration.

They are known for their ease of installation and are designed to last, with pressure ratings that meet or exceed industry standards, reliable sealing, and resistance to corrosion in the most demanding work environments.

- The design standards comply with standards DIN 2353 and ISO 8434-1.
- High-pressure capacity, reliable sealing, and corrosion resistance.
- Commonly used in industrial machinery, machine tools, hydraulic, machinery, and other fields.
- SAE 070220 compliant, using carbon steel with a trivalent chromium zinc plating.
- Compression style fittings, with their ease of use, support fluid flow applications mainly used in hydraulic systems.
